

HyphaFUSION is an extension of the HyphaSATPTT solution. By integrating the satellite, LTE and radio bearers and using the radio control head in the vehicle, a user can switch easily between radio and satellite talk groups or channels.

HyphaFUSION is a “Vehicle as a Hub” solution that allows multiple users to maintain communications via their devices – e.g. portable radio, smartphone or laptop, when around or away from the vehicle.

- Single control head integration
- Integrates with P25 or DMR radios
- Multi-bearer connectivity with seamless switching
- Least-cost routing on satellite, LMR and LTE
- Vehicle acts as a voice and data hub
- Compatible for integration with HyphaMESH solutions
- Integrates with HyphaCONNECT for links back to the LMR Core or Dispatch console
