

## **Cobham SATCOM announces strategic partnership with Hypha by Wireless Innovation**

*Collaboration will facilitate more resilient communication capabilities worldwide for First Responders, Utilities Workers and Oil & Gas sector*

**Copenhagen, Denmark, 07 March 2022:** Cobham SATCOM, the market leading provider of radio and satellite communication solutions to the maritime and land markets, has today announced its strategic partnership with Hypha by Wireless Innovation, to enable resilient critical communications solutions.

Critical comms networks that solely rely on legacy radio networks with narrow band voice only, can put the population, first responders and utility workers live at risk. This is particularly the case in remote areas, where 'white spots' – places with little or no radio reception – limit communication, causing major delays when every second counts.

The PRISM solution provided by Cobham and Hypha provides a multi-layered full digital solution extending coverage of existing LMR networks using a combination of LTE and Satellite to ensure highly reliable connectivity beyond the edge of current network coverage. By applying the PRISM routing, also LMR network outages are covered increasing the overall network reliability inside as well as outside LMR network boundaries. The combination boasts seamless LMR integration and is least-cost-routed. Add to that a ubiquitous layer of data connectivity. All in support of customers' cost effective transition from classical LMR to encrypted mobile voice and data support independent of the availability of a bespoke trunk network.

Henrik Nørrelykke, Vice President, Land Systems at Cobham SATCOM, said: "As consumers, we have a high level of expectation when it comes to our connectivity – we view Wi-Fi and mobile data as a human right, yet emergency responders and blue light services, amongst others, are working with voice capabilities when they also need real-time data comms to do their jobs and remain safe. Partnering with Hypha by Wireless Innovation enables us to bring this new level of resilience for critical communication networks."

Neil Jamieson, Group CEO at Hypha, by Wireless Innovation, said: "Today, more than ever, Public Safety agencies around the world need communication networks that provide coverage and reliability. Together, Cobham SATCOM and Wireless Innovation have formed a strategic partnership that will effectively see an Internet of Critical Comms for mission-critical networks. I am excited about combining our skills and applying this to the global market to ensure the new generation of Public Safety communications networks will provide enhanced service, coverage, and the data capabilities required for the future."

## **About Cobham SATCOM**

Cobham SATCOM is a global leader in satellite communications solutions for the maritime and land segments, providing business- and mission-critical connectivity to a broad range of service providers, enterprise, and government customers. Cobham SATCOM designs and manufactures high-performance satellite communications and critical communications products under the EXPLORER, SAILOR, Sea Tel, and TRACKER brands. We offer outstanding performance and value, with unrivaled support through our global sales and service network.

Cobham SATCOM is the market leader in tracking antennas for maritime, fixed, and mobile applications across GEO, LEO, and MEO systems. We are the trusted provider and partner for multiple NGSO constellation operators, who rely on our Gateway antennas to ensure highly reliable, carrier grade backbone connectivity, as well as User Terminals to enable innovative new commercial and government services around the globe.
